

Overview

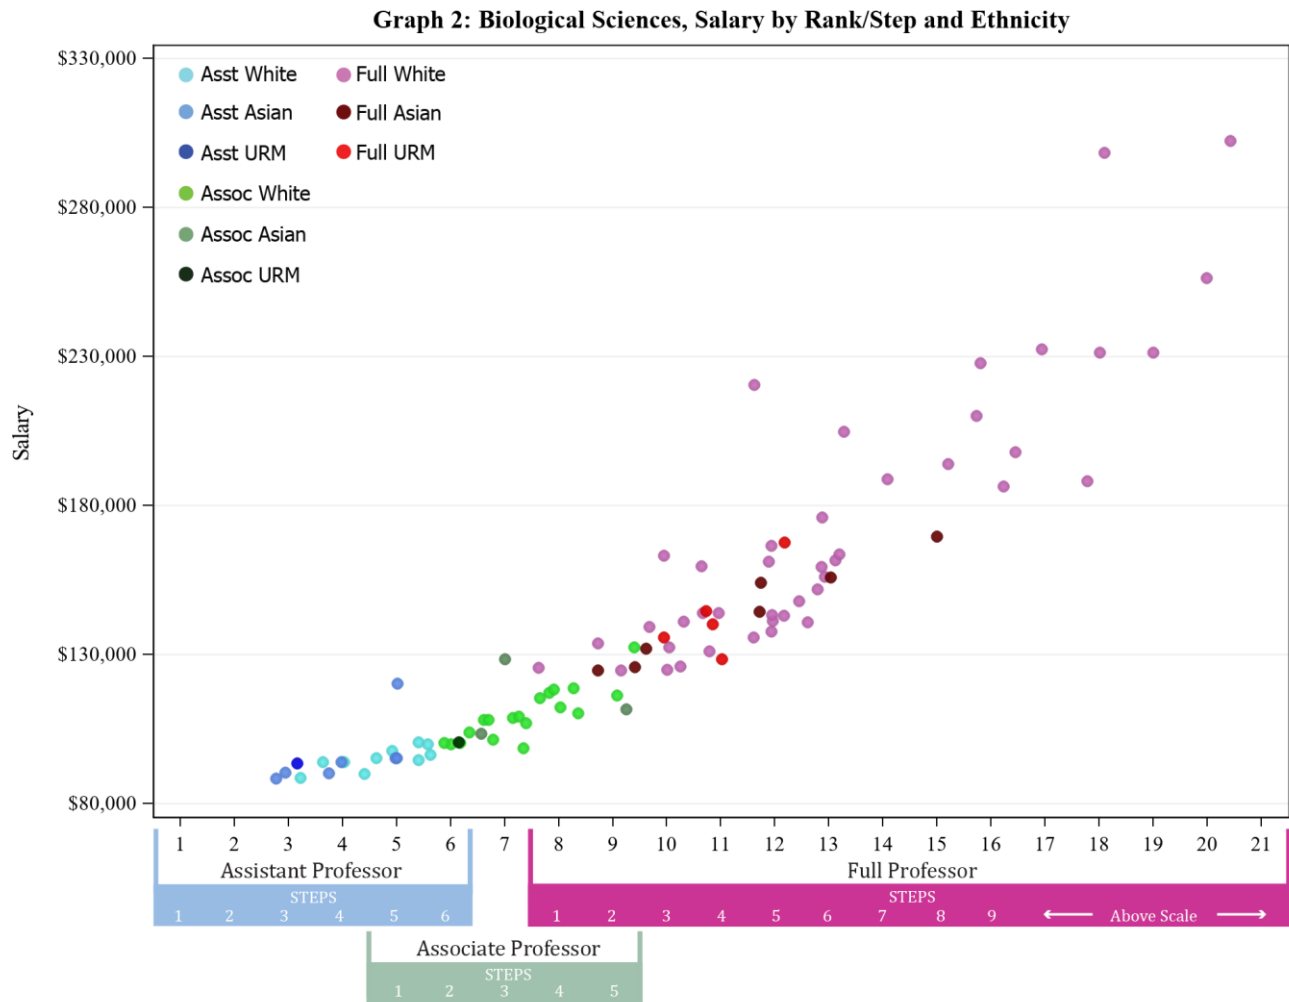

A joint Administration-Academic Senate Committee redesigned our annual campus pay equity study of ladder rank faculty salaries. The analyses presented in this report focus on regression models that go beyond the annual residual analysis conducted in the past (1997-2014) and include evaluation of rate of progression through the ranks. Analysis of salary data from October 2018 indicated no evidence of systemic disparity in pay associated with gender and/or ethnicity at the campus level when experience, discipline, and rank are included in the model.

Methodology (see campus level report)

Results

1. Salary data for all ladder rank faculty plotted as a function of rank/step/gender and rank/step/ethnicity illustrated in Graphs 1 and 2.

- Multiple regression analysis of salary vs rank/step. As indicated in Table 1, the simplest model with only demographic variables shows that relative to white male faculty, women earn salaries that are 9% lower, Asian faculty 15% and URM faculty 6% lower. Only 7% of salary variation is explained by this model. After all control factors are added, 94% of salary variation is explained by a model with demographic, experience, field, and rank variables. After adjusting for covariates, relative to white male faculty, salaries are 0.2% lower for faculty who are women, 2.5% higher for Asian, and no different for URM faculty. This model also shows demographic variables are not statistically significant.

Table 1

Submodel ¹	R-sq	Significant Variables	Salary Difference		
			Women vs Men	Asian vs White	URM vs White
1 Demography	0.07	Asian*	-8.7%	-15.3%	-6.4%
2 Demography, Experience	0.62	Asian*, Experience***	-5.8%	-11.6%	-1.4%
3 Demog, Exper, Field	0.68	Experience***, Field**	-4.2%	-7.3%	-1.6%
4 Demog, Exper, Field, Rank	0.94	Rank***	0.2%	3.0%	0.1%
5 Demog, Exper, Field, Rank ²	0.94	Rank***	-0.2%	2.5%	0.0%

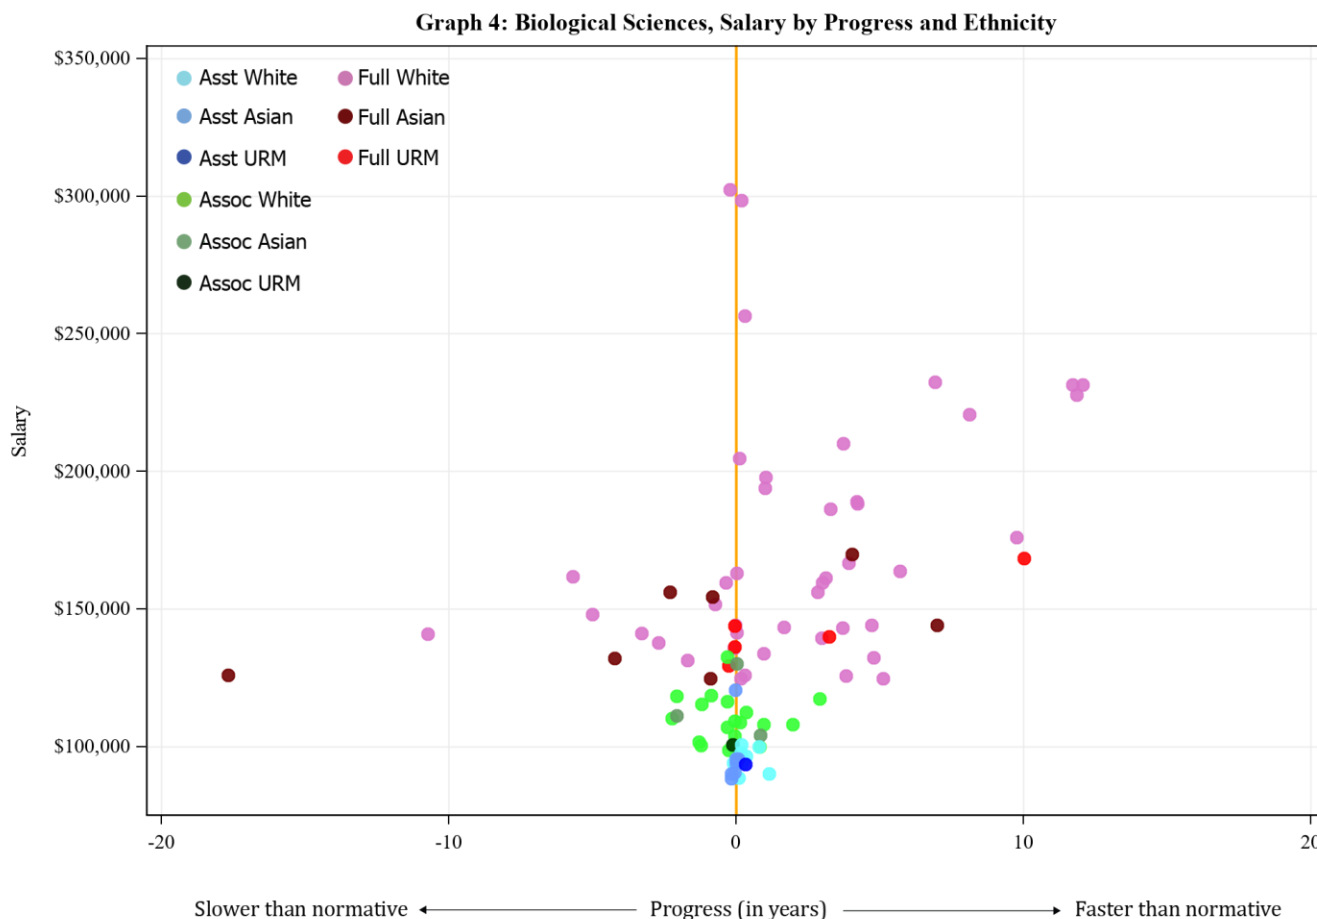

*p<0.05, **p<0.01, ***p<0.001

¹Experience includes years of service, years since degree, and decade of hire. Field includes department and the market ratio of salaries tied to the faculty member's department. Rank includes their starting rank at UCI, their current rank at UCI, and where they stand in relation to normal progress.

²Final model corrected for collinearity and included demographics, decade of hire, department, market salary ratio, progress***, current rank***, and starting rank***.

3. Progress Rate plotted as a function of gender and ethnicity illustrated in Graphs 3 and 4.

4. **Progress Rate Analysis:** Using a simple t-test, the results indicate that there is no statistically significant difference in progression rate means by gender when compared to white male faculty. However, Asian faculty progress at a rate that is 2.6 years slower than white males.

Progress Rate (in years) Comparison

Comparison	n	Mean	t	df	p-value
White Male vs	53	1.62			
Women	28	0.50	-1.31	79	0.195
URM	7	1.86	0.16	58	0.877
Asian	17	-0.94	-2.26	68	0.027

Note. Multivariate regression was conducted estimating rates of progression adjusting for experience, discipline, and initial rank. These analyses showed no significant differences between White men and Women, URM, or Asian faculty.
