

Overview

A joint Administration-Academic Senate Committee redesigned our annual campus pay equity study of ladder rank faculty salaries. The analyses presented in this report focus on regression models that go beyond the annual residual analysis conducted in the past (1997-2014) and include evaluation of rate of progression through the ranks. Analysis of salary data from October 2018 indicated no evidence of systemic disparity in pay associated with gender and/or ethnicity at the campus level when experience, discipline, and rank are included in the model.

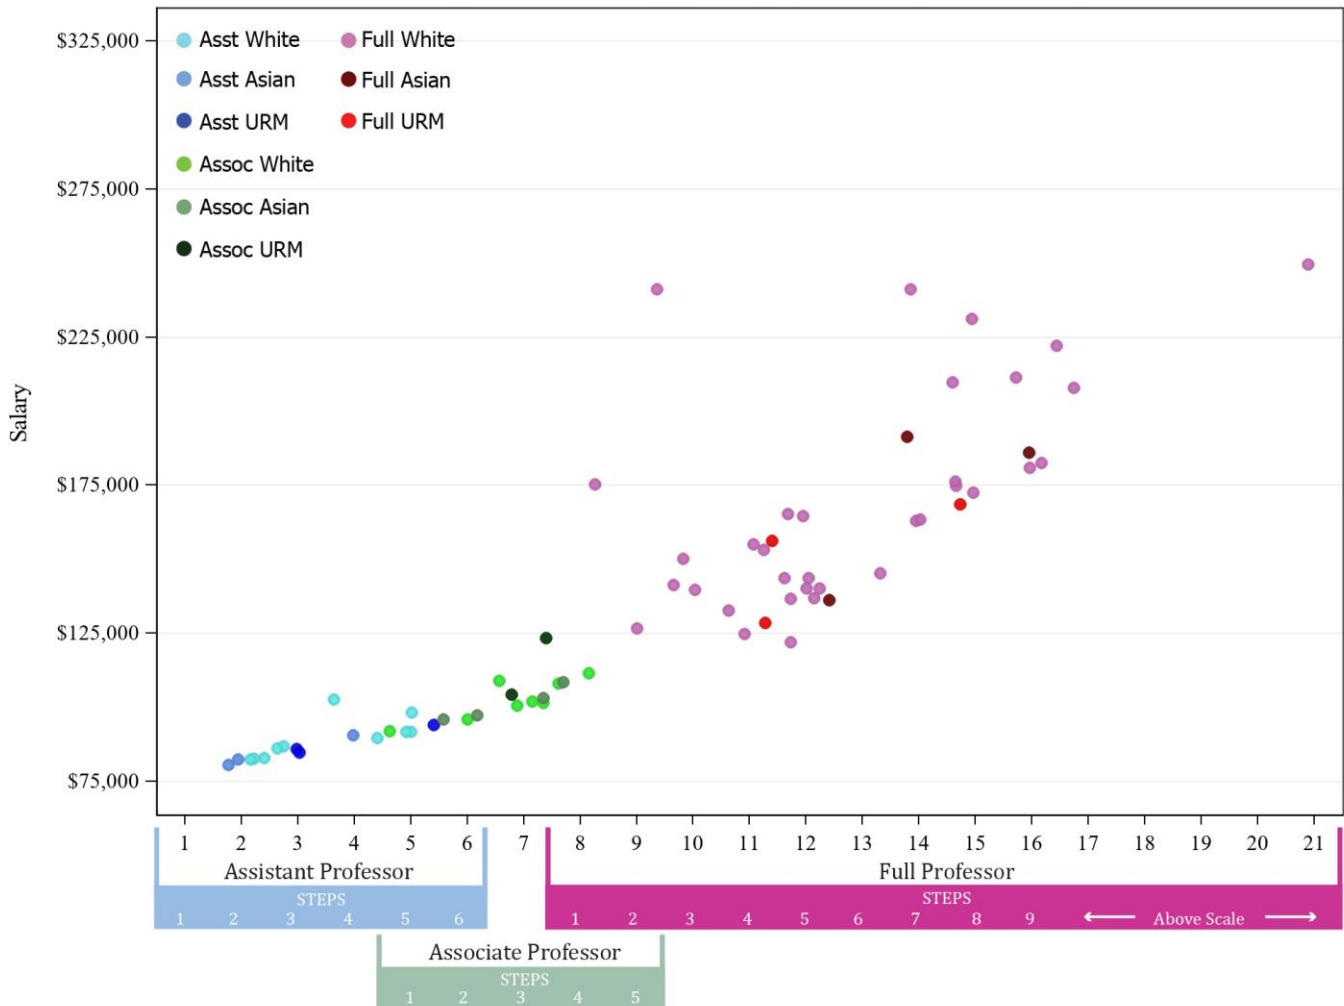

Methodology (see campus level report)

Results

1. Salary data for all ladder rank faculty plotted as a function of rank/step/gender and rank/step/ethnicity illustrated in Graphs 1 and 2.

Graph 2: Social Ecology, Salary by Rank/Step and Ethnicity

- Multiple regression analysis of salary vs rank/step. As indicated in Table 1, simplest model with only demographic variables shows that relative to white male faculty, women earn salaries that are 2.4% lower, Asian faculty 18% higher, and URM faculty 16% lower. Only 7% of salary variation is explained by this model. After all control factors are added, 87% of salary variation is explained by a model with demographic, experience, field, and rank variables. After adjusting for covariates, relative to white male faculty, salaries are 0.2% higher for faculty who are women, 3.8% lower for Asian, and 2.2% lower for URM faculty. This model also shows demographic variables are not statistically significant.

Table 1

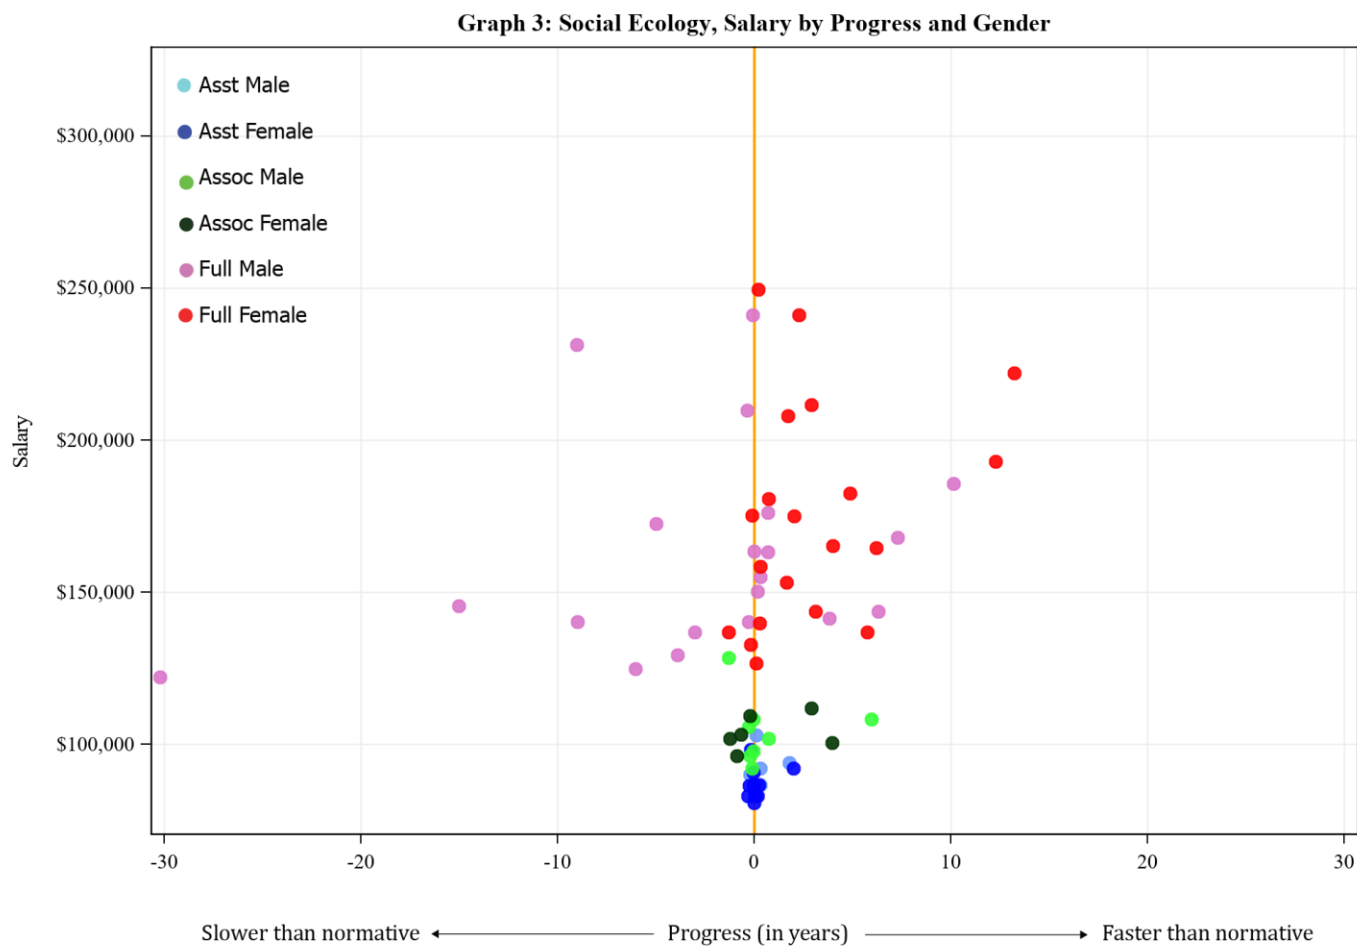

Submodel ¹	R-sq	Significant Variables	Salary Difference		
			Women vs Men	Asian vs White	URM vs White
1 Demography	0.07		-2.4%	-18.5%	-15.6%
2 Demography, Experience	0.66	Experience***	7.3%	-2.2%	-7.1%
3 Demog, Exper, Field	0.66	Experience***	6.0%	-1.4%	-6.6%
4 Demog, Exper, Field, Rank	0.88	Experience*, Rank***	1.8%	-3.7%	0.8%
5 Demog, Exper, Field, Rank ²	0.87	Rank***	0.2%	-3.8%	-2.2%

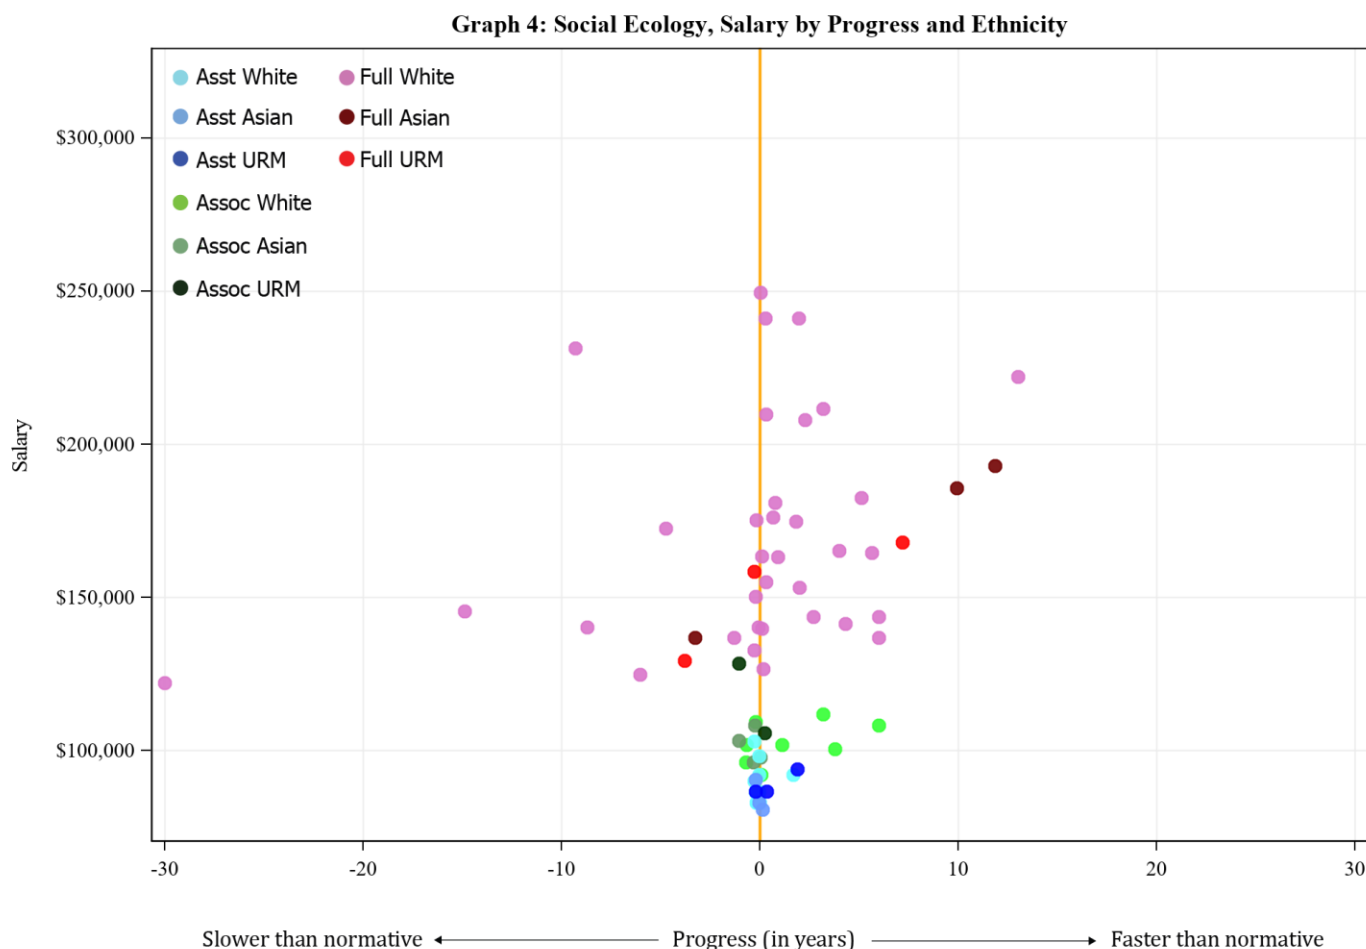

*p<0.05, **p<0.01, ***p<0.001

¹Experience includes years of service, years since degree, and decade of hire. Field includes department and the market ratio of salaries tied to the faculty member's department. Rank includes their starting rank at UCI, their current rank at UCI, and where they stand in relation to normal progress.

²Final model corrected for collinearity and included demographics, decade of hire, progress*, current rank***, and initial rank*.

3. Progress Rate plotted as a function of gender and ethnicity illustrated in Graphs 3 and 4.

4. **Progress Rate Analysis:** Using a simple t-test, results indicate that there is no statistically significant difference in progression rate means by ethnicity when compared to white male faculty. However, female faculty progressed at a rate that is 4.2 years faster than white male faculty.

Progress Rate (in years) Comparison

Comparison	n	Mean	t	df	p-value
White Male vs	23	-2.39			
Women ^a	36	1.83	2.49	27	0.019
URM ^a	8	0.50	1.48	28	0.149
Asian	10	1.80	1.58	31	0.125

Note. Multivariate regression was conducted estimating rates of progression adjusting for experience, discipline, and initial rank. These analyses showed no significant differences between White men and Women, URM, or Asian faculty.

^aHomogeneity of variance assumption not met. Satterthwaite variance estimator used.
