

## Overview

A joint Administration-Academic Senate Committee redesigned our annual campus pay equity study of ladder rank faculty salaries. The analyses presented in this report focus on regression models that go beyond the annual residual analysis conducted in the past (1997-2014) and include evaluation of rate of progression through the ranks. Analysis of salary data from October 2018 indicated no evidence of systemic disparity in pay associated with gender and/or ethnicity at the campus level when experience, discipline, and rank are included in the model.

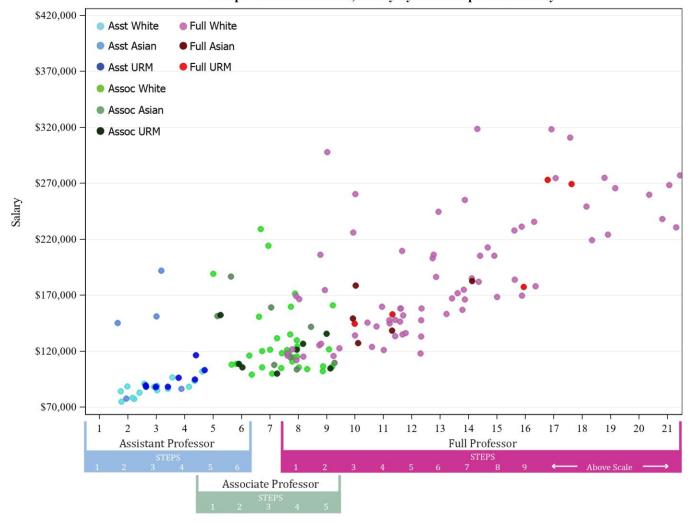

Methodology (see campus level report)

## Results

1. Salary data for all ladder rank faculty plotted as a function of rank/step/gender and rank/step/ethnicity illustrated in Graphs 1 and 2.

Graph 2: Social Sciences, Salary by Rank/Step and Ethnicity

2. Multiple regression analysis of salary vs rank/step. As indicated in Table 1, simplest model with only demographic variables shows that relative to white male faculty, women earn salaries that are 17% lower, Asian faculty 9.3% and URM faculty 14% lower. Only 11% of salary variation is explained by this model. After all control factors are added, 92% of salary variation is explained by a model with demographic, experience, field, and rank variables. After adjusting for covariates, relative to white male faculty, salaries are 0.7% lower for faculty who are women, 2.7% higher for Asian, and 3.9% higher for URM faculty. This model also shows demographic variables are not statistically significant.

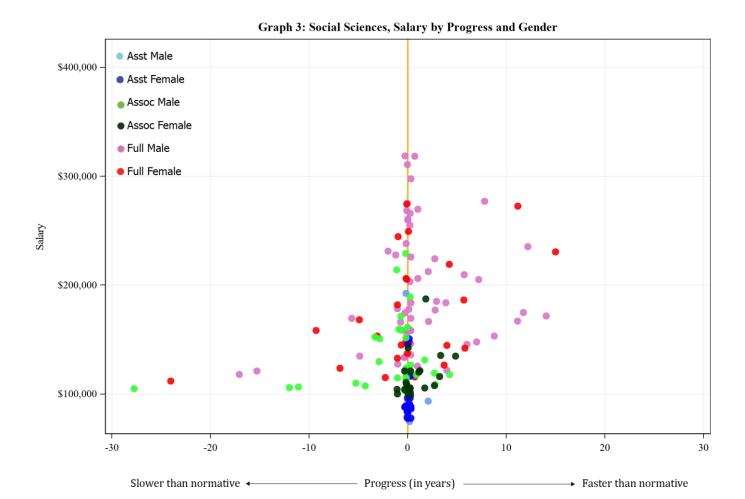

Table 1

			Salary Difference		
		Significant	Women vs	Asian vs	URM vs
Submodel <sup>1</sup>	R-sq	Variables	Men	White	White
1 Demography	0.11	Women***	-17.4%	-9.3%	-14.1%
2 Demography, Experience	0.53	Women*, Experience***	-8.5%	4.8%	-5.1%
3 Demog, Exper, Field	0.75	Experience***, Field***	-1.0%	0.8%	0.6%
4 Demog, Exper, Field, Rank	0.92	Field*, Rank***	-0.5%	3.1%	4.4%
5 Demog, Exper, Field, Rank <sup>2</sup>	0.92	Experience***, Field***, Rank***	-0.7%	2.7%	3.9%

<sup>\*</sup>p<0.05, \*\*p<0.01, \*\*\*p<0.001

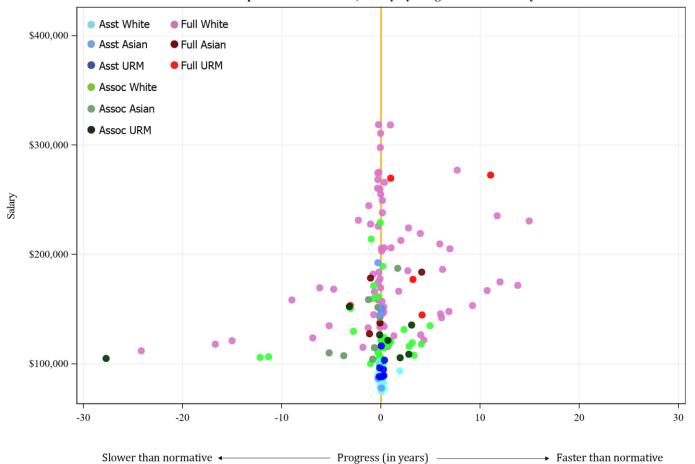

3. Progress Rate plotted as a function of gender and ethnicity illustrated in Graphs 3 and 4.

<sup>&</sup>lt;sup>1</sup>Experience includes years of service, years since degree, and decade of hire. Field includes department and the market ratio of salaries tied to the faculty member's department. Rank includes their starting rank at UCI, their current rank at UCI, and where they stand in relation to normal progress.

<sup>&</sup>lt;sup>2</sup>Final model corrected for collinearity included demographics, decade of hire\*\*\*, department\*\*\*, progress, and current rank\*\*\*.

Graph 4: Social Sciences, Salary by Progress and Ethnicity

4. <u>Progress Rate Analysis</u>: Using a simple t-test, results indicate that there is no statistically significant difference in progression rate means by either gender or ethnicity when compared to white male faculty.

Progress Rate (in years) Comparison

Comparison	n	Mean	t	df	p-value
White Male vs	78	0.54			
Women	65	0.23	-0.39	141	0.698
URM <sup>a</sup>	21	-0.29	-0.51	26	0.615
Asian <sup>a</sup>	19	-0.42	-1.37	78	0.174

<sup>&</sup>lt;sup>a</sup>Homogeneity of variance assumption not met. Satterthwaite variance estimator used.
